Greetings Sunshine Metals Customers,

Sunshine is happy to announce the consolidation of our West Coast facilities formally located in Auburn, Washington and Santa Fe Springs, California. Our new larger location in Fullerton, California offers 40,000sq.ft. of available space to process and supply your material requirements formally handled out of those facilities. All pertinent record keeping will be maintained at the new location.

Senior Management and sales staff remain mostly unchanged with this move and look forward to serving your raw material needs now and in the distant future.

Sunshine values you as a business partner and will strive to provide its customers worldwide with materials of the highest quality.

Best Regards,

Senior Management
